

There is flux only through the curved surface.

A)  $E h (\pi r^2) = \lambda h / \epsilon_0$

B)  $E h (2\pi r) = \lambda h / \epsilon_0$

C)  $E h (2\pi r) = \lambda / \epsilon_0$

D)  $E (2\pi r) = \lambda h / \epsilon_0$

A)  $\lambda h (2\pi r)$

B)  $\lambda h (\pi a^2)$

C)  $\lambda h (\pi r^2)$

D)  $\lambda h (\pi r^2) / (\pi a^2)$

A)  $\rho_0(1 - r/a)(2\pi r) dr$

B)  $\rho_0 (4\pi r^2) dr$

C)  $\rho_0(1 - r/a)(4\pi r^2) dr$

D)  $\rho_0(1 - r/a)(\pi r^2) dr$
